Abstract

The new millennium opens with an increasing diversity of computerized devices. To help job-seekers to find the job information online conveniently and quickly. The system combines with Deep Web technology crawling many recruitment websites' job information and saves them into database to provide retrieval service for user. To overcome the difficulties of the current dynamic webpage's data grab. The practical application shows that his system can provide a good retrieval service conveniently and quickly.

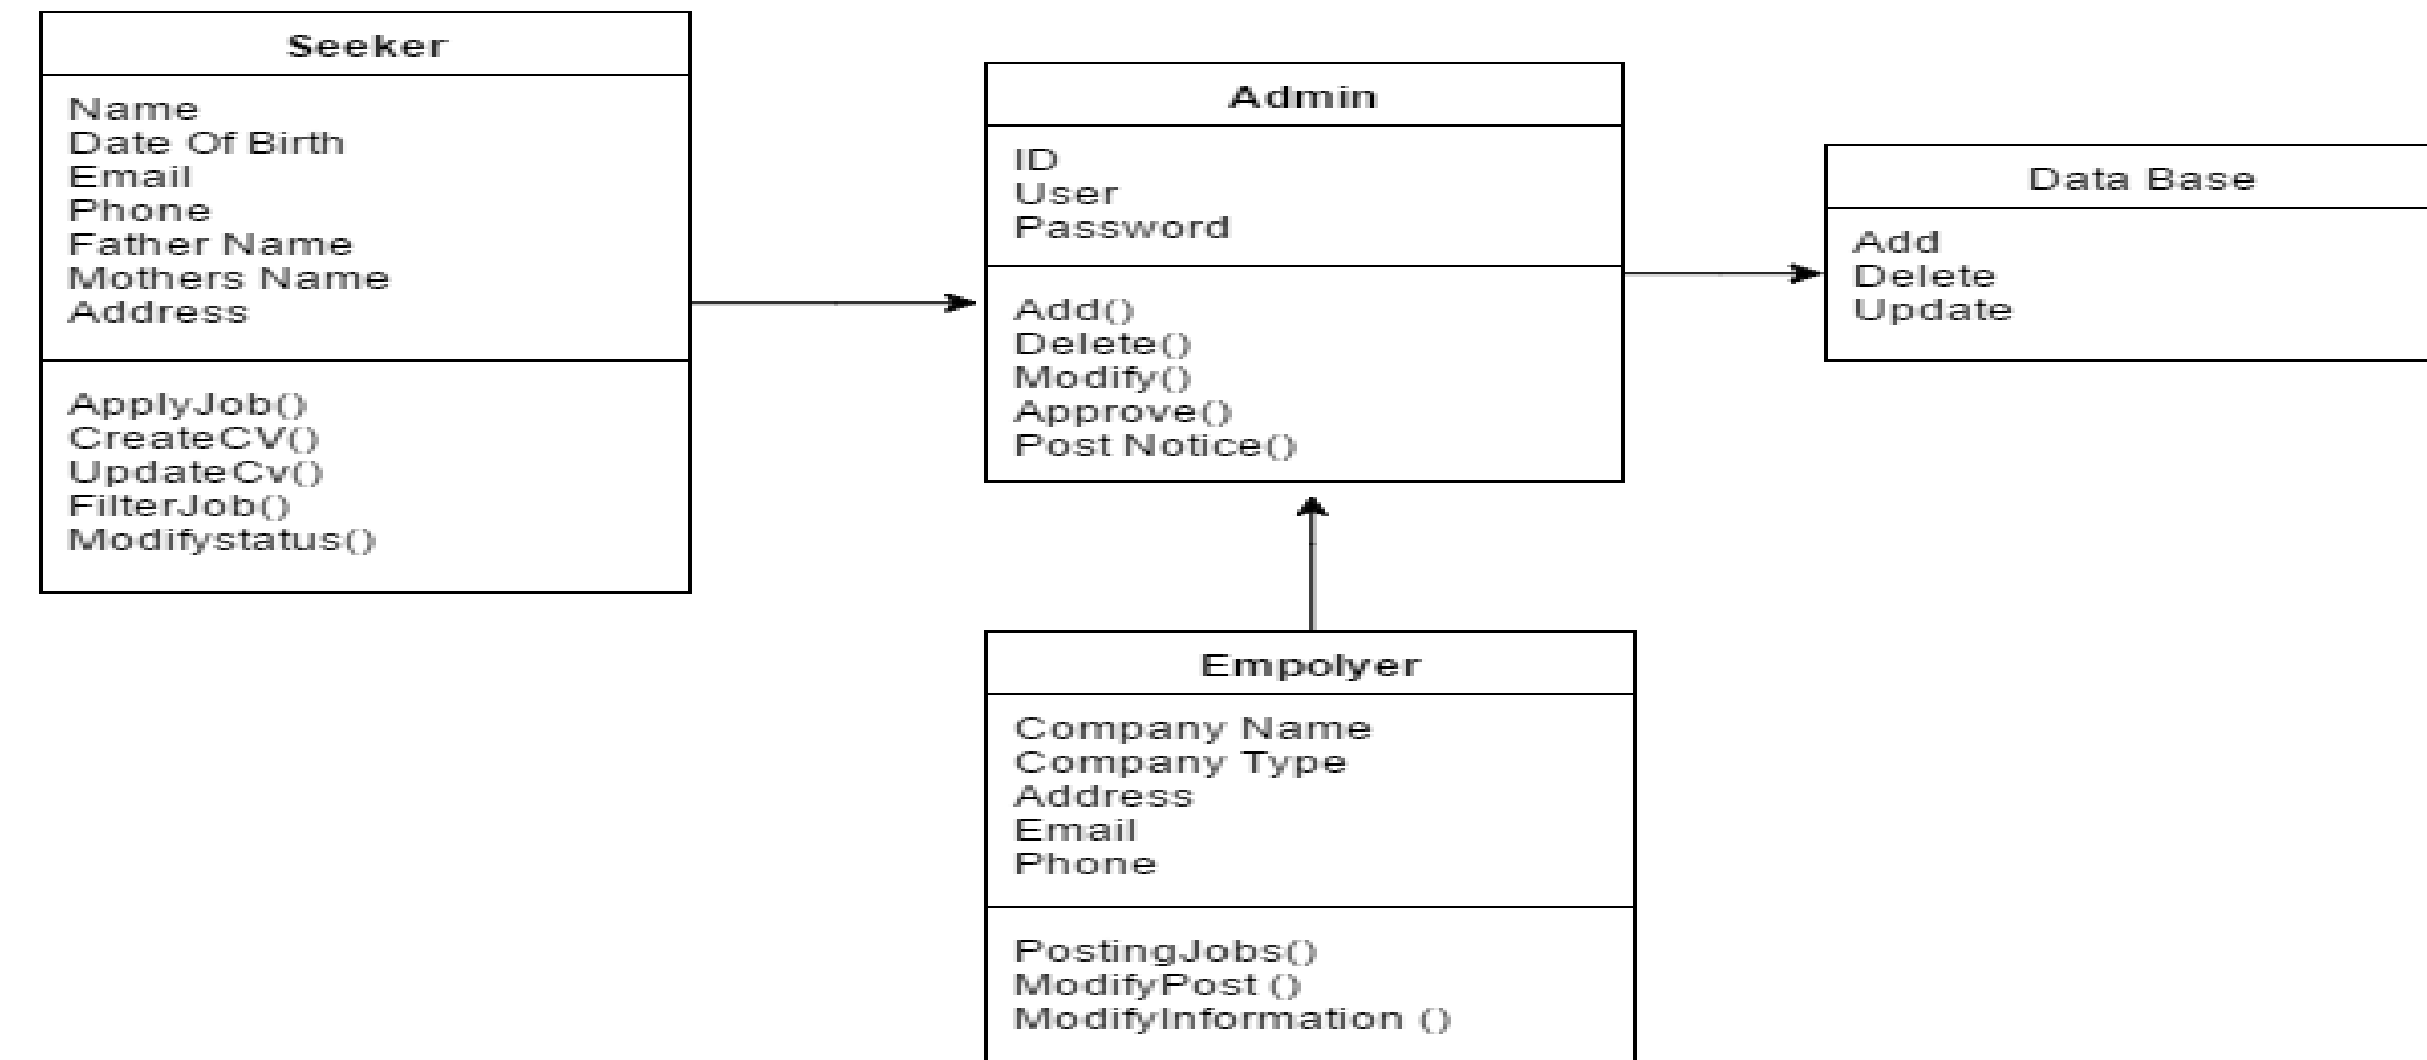

Introduction

Job portals are one of the easiest and effective ways to interact with the companies and search for a job. These portals provide us with enough opportunities to start from the scratch, like from making curriculum vitae to online job interview. Though majority of them does the same task, they more or less follow the same procedure to build and to process. In general these portals are used mostly by the graduate who wants to get in to the job market right after finishing their study. In some cases students who are currently studying or about to finish the study also uses this type of online portals. While the current students look for part time jobs or mini jobs, the other type of student mass look for project, internship or thesis. Even some of them are also interested in attending some comparatively long workshops, but for the prospective job seekers get the most from it. So, in all respects, the online job application portals are considered as vital resource in case of employment.

Software requirements

- JavaScript
- HTML5, CSS
- NodeJS(Express Framework)
- JDS (embedded JavaScript)
- WebSocket
- MongoDB database (Mongoose)
- Webstrom

Class Diagram

Working Steps

Job seeker:

Specially Design For Sekker to regaistration and post CV

Employer:

Empolyer Registration and post jobs, Advatiesments.

Admin Panel :

To Edit /Modified /delete data from Job seeker and Empolyer data

Future Work

- Brand Identity
- Priority Job
- Corporate Account
- Email & SmS Alert.
- Job Seeker Online CV Maker
- Account categorized for Seeker
- Video Chat

Conclusion

The job portal that is going to be developed under the specification presented, would be beneficial towards the international students. They would be able to interact with the portal in a more flexible manner as different user friendly feature has been added. Moreover the business value of this project would also be significant as some unique features will be added during the later phase of this project. As this is just a demo project, many features are still to be implemented.

Discussion and Limitation

- Respons of chat is not generating.
- No pop-up are in Application.
- Huge Project and here we make partially.

Use Case
